We offer services including:

- Thermoforming Packaging of medical supplies
- Packaging validation
- Packaging design
- Packaging material
- Sterile barrier packaging
- Labeling and graphic design

Contract Sterilization

Contract sterilization by ETO (ethylene oxide) is a service offered by PROGMED. that provides your company with sterilized medical supplies. This process involves using ethylene oxide gas to kill any harmful microorganisms on the surface of the medical supplies, such as bacteria and viruses, to ensure that they are safe to use on patients.

ETO sterilization is a highly effective method for sterilizing a wide range of medical supplies are commonly used in the healthcare industry. This method is often preferred over other sterilization techniques because it is more effective at killing certain types of microorganisms and is less likely to damage delicate medical supplies.

PROGMED contracts for ETO sterilization services, provide specially designed sterilization cycle where the medical supplies can be exposed to the ethylene oxide gas. This process takes several hours, and the medical supplies are carefully monitored to ensure that they are exposed to the right amount of gas for an adequate amount of time. Once the sterilization process is complete, the medical supplies are carefully inspected by PROGMED to ensure that have been adequately sterilized.

PROGMED invest in a new EO sterilization system :

- Chamber sterilizer capacity 8 pallets
- Pre-conditioning room
- Desorption room
- Control the product parameters
- Automatic handling conveyors
- Customized EO sterilization cycle
- Supervision and Human Machine Interface (HMI) function

Quality

providing high-quality medical products that meet the needs and expectations of our customers. To achieve this, PROGMED follow a strict quality policy based on the ISO 13485 standard, which outlines the requirements for a quality management system specific to the medical device industry.

PROGMED quality policy is based on the principles of customer focus, process approach, and continuous improvement. We believe that by following these principles, we can consistently produce medical products that meet the highest standards of quality and safety.

regular audits and inspections to ensure that our products meet the required standards and that our processes are consistent and reliable.

To ensure that our products and services meet these standards, PROGMED implemented a robust quality management system that covers all aspects of our operations, from product design and development to manufacturing, testing, and distribution. Our quality management system is regularly reviewed and updated to ensure that it remains effective and compliant with the ISO 13485 standard.

In addition, PROGMED have a team of highly trained and experienced quality professionals who are responsible for overseeing our quality management system and ensuring that it is being implemented effectively. They also conduct

PROGMED commitment to quality is at the heart of everything we do. By following the ISO 13485 standard and implementing a robust quality management system, we are able to consistently produce medical products that meet the highest standards of quality and safety, and that help to improve the lives of our customers.
